Committee:

Senate Committee On Rules

Measure, Appointment or Topic:

SB1153

I respectfully request you to leave our private water rights alone. Private wells are exactly that, private. We are responsible for drilling them, repairing them, and when necessary, replacing them. We do NOT need the government getting involved in our private wells. When we live in the country and are dependent on private well water, there is always a risk. As Americans we take that risk on, and do not need the government getting involved and messing up something that works. If you want to ensure clean water, then make sure people and companies are being responsible with their waste and business practices. But i see no value at all in monitoring private wells. Keep your hands off of my property.
