

Submitter:

David Farris

On Behalf Of:

Committee:

Senate Committee On Rules

Measure, Appointment or Topic:

SB1153

Surface waters -- lakes, ponds, rivers and streams -- are as much a birthright as mountains and coastlines. Tapping them for their water is necessary, but doing so must be measured; the resource cannot be used to point of extinction of species much less draining them dry. Mere consideration of such impact is a necessary first step toward a future for our children and grandchildren. David Farris.
