Committee: Joint Committee On Transportation Reinvestment

Measure, Appointment or Topic: HB2025

While I support the current package, I feel it does not go far enough to prevent climate change, which is essential at this turning point. I would like to see more money for EV rebates, charging stations that actually are fully functional, electrifying school buses and rail transport. I also see a glaring hole with no funding for an interstate bridge, which must have light rail and pedestrian/biking capabilities.
