Committee:

Senate Committee On Rules

Measure, Appointment or Topic:

HB2977

House Bill 2977 provides an important revenue source to protect fish and wildlife habitat and populations across the state including coastal programs. The programs that will benefit from this funding are important and the distribution plans are well thought out. These programs in the Department of Fish and Wildlife and in the Department of Agriculture are focused on protecting and managing habitat and fish and wildlife populations. The additional program support to assist the statewide invasive species council and associated programs are very important to allow for education and rapid response to threats to habitat and native populations. Thank you very much for your support of this important legislation.
