Committee: House Committee On Agriculture, Land Use, Natural
Resources, and Water

Measure, Appointment or Topic: HB4105

Oppose HB 4105

As our climate disruptions continue it is so critical for our forests to be a carbon sink. Intact forests are good for our planet. We need to value the health of our forest. Use science not greed to eliminate the trees. The science shows a healthy forest that is sustainably harvested is the best for the workers, communities & the planets health. Keeping the forest floor for regeneration of the trees is best for the forest.

Removal of all living creatures in our forests is not good for the planet or species. Our pollinators live in the forests & endangered species too. We can plan for ongoing tree harvests. Do take the care of our trees & save the old growth trees too. Fire safe is not tree farms as we saw in California fire ran through the "fire safe" forest. Lets plan for the care of our planet. Not for short sited gains for the logging companies at the peril of our planet.
