

Submitter: Kelley Nielsen  
On Behalf Of:  
Committee: Senate Committee On Energy and Environment  
Measure, Appointment or Topic: SB1582

What's not to love about a distributed energy grid? It's a logical extension of the renewable energy revolution that's taking the rest of the world by storm. Distributed systems of all sorts are more resilient and responsive than centralized ones. They empower individual participants instead of controllers and authority figures. Let the people lead the way with community energy!
