

This bill will destroy some of the best farmland in the world, and will raise electricity prices for tens of thousands of people. At a time when the state is trying to encourage people to stop using gas for cars and for heating and cooking, allowing electricity prices to rise due to massive data center electricity usage, is counterintuitive and counterproductive.

Don't ruin the home of so many people for a massive corporate take over. Keep the land for PEOPLE, not for a data center that no one needs or wants.

HALT SB 1586!
