

Submitter: B Tobias
On Behalf Of: BETTER EVIDENCE TECHNIQUES NOW
Committee: House Committee On Rules
Measure, Appointment or Topic: SB1515

We now have improved and more accurate "scientific methods" to use for evidence in court cases. Instead of hair microscopy they use either nuclear or mitochondrial DNA studies which are accurate. Instead of bite marks they use DNA from oral fluids which again is accurate. This just represents updating to more accurate methods of testing to ensure we have the right person behind bars, which is the goal.
